## Redefining Transport Testing

Network standards for transport tests are becoming more diverse, such as Ethernet, OTN, SDH/SONET, eCPRI/RoE/CPRI, PTP, Fibre Channel, etc. Additionally, speeds are increasing with 100G/25G Ethernet and 16G Fibre Channel development, and networks are continuing to evolve. With an easily configured modular design to support changing network standards and an easy-to-use GUI, the Network Master Pro MT1000A is perfect for speedy I&M of wide-area networks.

### Evolving Networks and Required Test Equipment

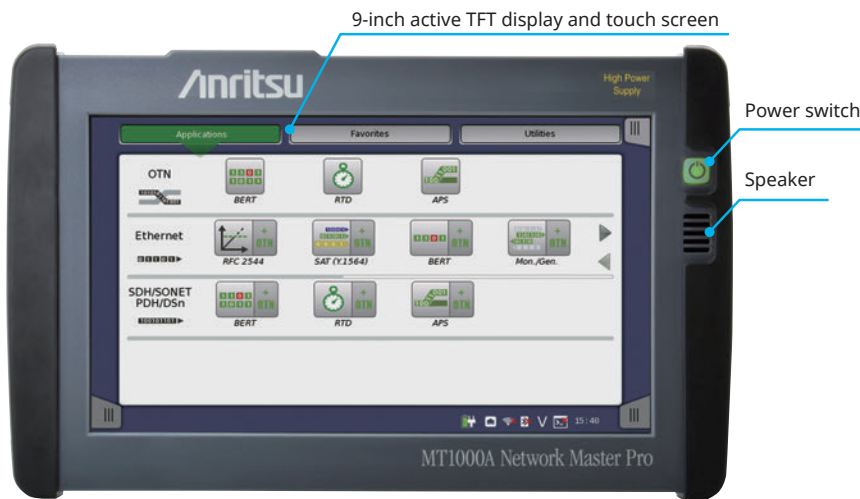

Core and metro networks are progressing to 100G interfaces. In addition, operators are also examining adoption of new and more types of client interfaces. Onsite network I&M work requires cost-effective support for diversifying services at speeds from 1G to 100G with a field tester that improves work efficiency.

- All-in-one transport tester
  - supports testing from 1.5 Mbps to 100 Gbps
- Easy and intuitive GUI
- WLAN\*/Bluetooth\*/LAN connectivity
- PDF, CSV and XML report generation for documenting test results
- Remote operation
- Remote control
- Compact, lightweight design for maximum field portability
- Modular platform ensuring maximum return on investment

\*: When switching to holdover with rubidium oscillator synchronized for at least 30 minutes to GPS or external 1PPS. At this time, the rubidium oscillator must be powered-on, and warmed-up for least 3 hours at a constant ambient temperature.

## ⚠ CAUTION

Do not subject the equipment mechanical vibration or shock. The accuracy will be degraded if the internal rubidium oscillator is damaged.
